Intended User:

- Client at a primary care veterinarian looking for resources related to human-animal interaction or human-animal bond. They may have questions specific to their circumstances (such as they are bringing a new baby into the household or are wondering how stress in their life is affecting their pet) or may just want to learn more about the topic.

Keywords and Categories:

- Species
    - Multi-Species (General Pet)
    - Dog
    - Cat
    - Small mammals/Pocket Pets
    - Horses
    - Farm Animals
    - Exotics (reptiles, birds)
    - Wildlife
- Objective - What do people want to gain from these resources? What do topics do they want to know more about?

1. Human Health & Development

- Mental health
- Neurobiology
- Neurodivergence
- Child health and development
- Aging
- Physical health

2. Animal Health & Welfare

- Pet health
- Animal welfare
- Choosing/adopting a pet

3. Human-Animal Interaction & Bonding

- General human-animal bonding/interaction
- Animal-assisted interventions

4. Safety & Risk

- Risk factors/zoonotic disease
- HAI safety
- Travel
- Disasters/emergency preparedness

5. Crisis & Life Challenges

- Domestic violence
- Crisis support
- Loss and grief
    -
- Population
    - General Public (applicable to anyone interacting with animals, even if they don't own pets)
    - General Pet Owners
    - Parents
    - Educators
    - Immune-Compromised Individuals
    - Disabled Individuals
    - Policymakers/Community Organizations
    - Clinicians
    - Seniors and caregivers
    - Veterans
    - Researchers
    - Animal exhibitors/breeders
- Source Type
    - Tier 1: Primary Research
        - Peer-reviewed journal articles, systematic reviews, meta-analyses. Highest rigor, most technical/jargon-heavy, written for researchers.
    - Tier 2: Government and Institutional Sources
        - CDC, NIH, WHO, USDA, AVMA, etc. Authoritative and vetted, but written and edited for a general audience — high credibility and high accessibility.
    - Tier 3: University and Nonprofit Sources/General Sources and Practical Guidance
        - HABRI, university news/extension articles, hospital patient-education pages. These are secondary syntheses of research rather than the research itself — reliable, readable, but one step removed from the primary source.
        - Well-vetted professional-association guidance, reputable educational nonprofits, or practical how-to content that isn't citing a specific study at all. Useful and accessible, but deserves more editorial scrutiny before publishing

Inclusion Criteria:

- Must be evidenced backed
    - The source must either cite specific research/data/named studies or provide references from credible sources (peer reviewed journals, government and institutional sources, universities)

- Must be published within the past 10 years (2016-Current Date)
- Must be in English
- Full article must be freely accessible
- Must address both humans and animals
    - Must substantively address the human-animal bond/interaction — not merely mention pets in passing
    - Must be able to be categorized into one of the objective catergories
- Must have a live, working, and reachable link
- Must have transparent authorship

Exclusion Criteria:

- Cannot be advertorial or promotional content
- Text cannot be blocked behind a pay wall
- Cannot only address humans or only address animals
    - No general pet-care tips
- No citation of research or data anywhere (only stories or unsupported claims without any sources)
- Unverifiable publisher
- Broken or third party only links
- No rewritten aggregation of other sites' material with no original reporting, citation, or institutional backing
- Do not include unmoderated forums/aggregators such as Quora, Reddit, Medium, Substack, LinkedIn

Exceptions and Notes

- Exception for publication date for foundational/landmark studies still being actively cited in current research
- Exception for publication date - Health/safety guidance must reflect current recommendations, not superseded or retracted advice (may exclude content that is 10 years old or less if it not longer reflects current recommendations)
- Exception for addressing both humans and animals if the animal-focused content is specifically about the interaction/relationship with humans (e.g., animal welfare in the context of human interaction), not standalone animal husbandry or veterinary care.
- Flag any content is commercially affiliated but legitimate science (such as resource from WALTHAM, which is funded by MARS)
- Flag any content that is geographically or legally non-generalizable to the United States
- When multiple sources cover the same finding, retain the highest-tier/most authoritative version rather than duplicating
- Provide balanced evidence (include both positive, neutral, and negative findings)
- If a category is not relevant (for example if there is no secondary objectives) leave the column blank in the database

Database Organization Schema:

- Title
- URL
- Source Institution

- Source Type
- Year Published
- Objective
- Secondary Objectives
    - Any other topics that are also addressed in the article/source besides the main focus
- Population
- Species
- Brief Summary
- Qualifications - how does the resource fit the inclusion criteria
- Flags/Notes (anything that falls into the exceptions and notes category should be flagged in the database. If any source is questionable or needs careful review it should be flagged in the database)
